

# Olsen Model 20 Double Flare

Standard Model 20

- Designed and developed to provide the industries tube form ... every time
- Flares brass, copper, steel and stainless steel tubing for pneumatic, hydraulic and fluid systems

Model 20 Semiautomatic

- Creates a perfect double flare, swage, bead, tulip bead and upset single flare
- Pneumatically actuated cylinder
- Simple highly reliable design to produce a flare that provides extensive safety in coupling and uncoupling of fittings
- Available in standard, heavy duty and semiautomatic versions

## ENHANCING YOUR PROCESS

Olsen Manufacturing is committed to forming relationships with our customers that enables them to achieve their goals. We thrive on working in a cooperative environment where our customers can leverage our years of experience to keep them competitive in today's demanding environment.

We look forward to discovering how we can become a valuable part of your team.

The rugged, reliable and efficient Olsen Model 20 Double Flare has been the industry standard for creating double flares, beading and swaging.

Tool changes from tube size available in both English and Metric are quick and efficient.

The Olsen Model 20 has been tested and accepted by multiple industries on a global basis. With customers in the aerospace, automotive, submersible craft and agriculture to just name a few.

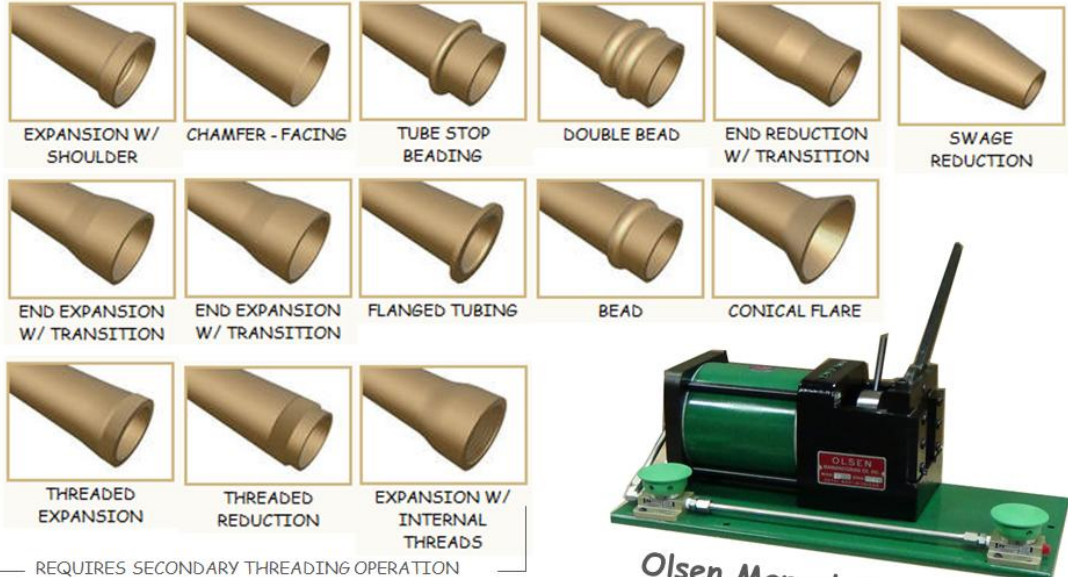

Whatever your industry, can be sure that the Olsen Power Flare can deliver the precision and efficiency you need.
